CASE STUDY

THE PROBLEM

Verifi is a financial and ecommerce software solution for companies to help alleviate credit card chargebacks. While this is a profitable financial business, the variety and breadth of high-volume keywords are somewhat slim. When Know Agency started managing the account, the chosen keywords were too broad and did not provide any value to the client. Phelps also discovered that the majority of pages on the site had thin, under-developed content.

THE SOLUTION

Phelps and Know started by utilizing Data Cube to analyze competitors and discovered which keywords would be more targeted to Verifi's customer base. Using the Longtail keyword feature, they identified hundreds of attractive keywords to go after and then defined a content augmentation program.

Once they were confident with the new keyword plan, they mapped some of the keywords to existing pages in Keyword Reporting and created new content pages and tracked all of them in groups in Page Reporting. They also utilized the new BrightEdge Ignite analysis to uncover other keywords that were missed but were an opportunity for optimization.

Finally, they worked with Verifi to present topics in a knowledgebase format, similar to what their competitors were doing, to further provide quick answers for potential new customers.

Jane Phelps
CEO
Knowagency.com

“Competitive analysis using BrightEdge is a valuable resource for us when searching for high-volume search terms to target for optimization.”

Results

The Data Cube score, a measure of search footprint and potential, increased from 413 to 3,130. Keywords almost doubled as well from 689 to 1,298. Organic search traffic increased 37% in less than 1 year.
